POWER GRID

THE PROMOTION CARDS

General rules for all promo cards

- These promo cards are only playable with a copy of Power Grid!
- You can use all promo cards together or just the cards you like the most. All cards are compatible.
- After preparing the power plant market and the draw pile of power plant cards, the chosen promo cards are shuffled into the pile of power plant cards. Finally the power plant 13 is placed as usual on top of the draw pile.

Flux-Generator

- The Flux-Generator is a power plant and can use and store all four types of resources in any combination - the ultimate hybrid power plant!
- When the Flux-Generator is drawn during the game and placed into the power plant market, the smallest power plant in the market is immediately removed from the game and placed back into the game box. Draw an additional power plant card as replacement and place it into the market.
- The Flux-Generator costs 33 1/3 Elektro and is bigger as the power plant 33. If both power plants are in the market, the Flux-Generator is placed behind the 33.
- The lowest bid for the Flux-Generator is 33 Elektro.
- The Flux-Generator needs any 3 resources and supplies 6 cities with electricity.

Transformer Station

- The Transformer Station enables anyone power plant to supply electricity to an additional city.
- When the Transformer Station is drawn, it will be immediately auctioned to the players regardless of the actual phase. After the auction draw an additional power plant card as replacement and place it into the market.
- The leading player starts the auction by either passing or bidding at least 10 Elektro. The players continue the auction in clockwise direction until all but one passed.
- The highest bidder pays his money and immediately connects the Transformer Station to one of his power plants by placing it below this plant. During phase 5 this power plant supplies one additional city when producing electricity.
- If the player buys a fourth (fifth) power plant and decides to discard this power plant, he also discards the Transformer Station.

Warehouse

- The player owning the Warehouse can store up to 3 additional resources
- When the Warehouse is drawn, it will be immediately auctioned to the players regardless of the actual phase. After the auction draw an additional power plant card as replacement and place it into the market.
- The leading player starts the auction by either passing or bidding at least 10 Elektro. The players continue the auction in clockwise direction until all but one passed.
- The highest bidder pays his money and immediately places the Warehouse next to his power plants. The Warehouse does not count as a power plant and can be used additionally to the three (four) power plants.
- In phase 3 the owner of the Warehouse can choose to buy up to three additional resources and store them on the three storage spaces. The owner can buy all resource types, even if he cannot use them with his actual power plants.
- The resources inside the Warehouse can always moved to power plants, which can store these type of resources. And of course any resources can be moved from power plants to the Warehouse.
- The resources in the Warehouse can only be used in power plants to produce electricity and to supply cities, the owner cannot simply dump them to place them back in the main storage.

Shortage of Resources

- The event card Shortage of Resources removes resources from the market.
- When the Shortage of Resources is drawn, immediately discard three resources of the cheapest type from the resource market (only one for uranium). If there is a tie for the cheapest resource, resolve the tie in the order coal, oil, garbage, uranium.
- After the Shortage of Resources is resolved, draw an additional power plant card as replacement and place it into the market.

Surplus of Resources

- The event card Shortage of Resources adds resources to the market.
- When the Surplus of Resources is drawn, immediately add three resources of the most expensive type in the resource market (only one for uranium). If there is a tie for the most expensive resource, resolve the tie in the order coal, oil, garbage, uranium.
- After the Surplus of Resources is resolved, draw an additional power plant card as replacement and place it into the market.

Theme Park

- The Theme Park needs so much electricity that it is considered a city.
- When the Theme Park is drawn, it will be immediately auctioned to the players regardless of the actual phase. After the auction draw an additional power plant card as replacement and place it into the market.
- The leading player starts the auction by either passing or bidding at least 10 Elektro. The players continue the auction in clockwise direction until all but one passed.
- The highest bidder pays his money and immediately places the Theme Park next to his power plants. The Theme Park does not count as a power plant and can be used additionally to the three (four) power plants.
- The player places one of his houses on the city space and moves his house on the scoring track one space ahead. There are no additional building costs (the city space shows 0 Elektro).
